

# LA-150FBU/LA-150UE/LA-150CE/LA-100IR Remote Function 程控功能的說明

## External Control Functions

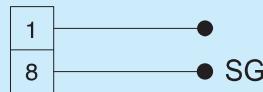

### 外部控制系統的接續方法

#### 1. Halogen lamp ON/OFF

Use this function when you want to turn on/off the lamp repeatedly while activating the functions (light quantity remote control, Lamp burn-out detection) of this apparatus. If it is short-circuited between the no. 1 pin and no. 8 pin (SG) of the remote control receptacle, the lamp will be turned off (unilluminated); it will be turned on (illuminated) by resetting.

#### 1. 鹵燈的開關

用於邊啟動光源裝置 (LA-150FBU) 的功能 (光亮遙控、燈泡燒斷驗出)，邊重復亮燈、滅燈的操作。將遙控用塞孔的1和8接頭連接時，燈滅(OFF)。解除時燈亮(ON)。

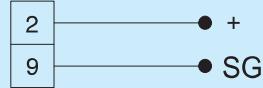

#### 2. Light intensity remote control

A control voltage, 0 to 5.0V DC (current consumption of 10mA or less), is applied to between the no. 2 pin and no. 9 pin (SG) of the remote control receptacle.

#### 2. 光亮調節遙控

將光亮遙控用轉換鍵置為遙控側(REMOTE)，將控制電壓DC 0V~+5V施加在遙控用塞孔的2和9 (SG) 接頭之間。

#### 3. Lamp warning detection

If a lamp filament is burn-out or the lamp is left unattached, the red warning LED will be turned on, and at the same time, a lamp Burn-out signal will be output (open collector output, transistor ON) to between the no. 3 pin and no. 10 pin of the remote control receptacle.

#### 3. 燈泡燒斷驗出

燈泡的燈絲燒斷或燈泡未裝時紅色警告燈亮，同時在遙控用的塞孔的3和10接頭之間輸出（開路集電極輸出）燈泡燒斷信號。

Photo coupler 光電離合器

#### 4. Lamp warning detection

If a lamp is burn-out and cannot function well in pre-set boundary, the yellow warning LED will be turned on, and at the same time, a lamp Burn-out signal will be output (open collector output, transistor ON) to between the No.4 pin and No.11 pin to the remote control receptacle.

#### 4. 燈泡老化驗出

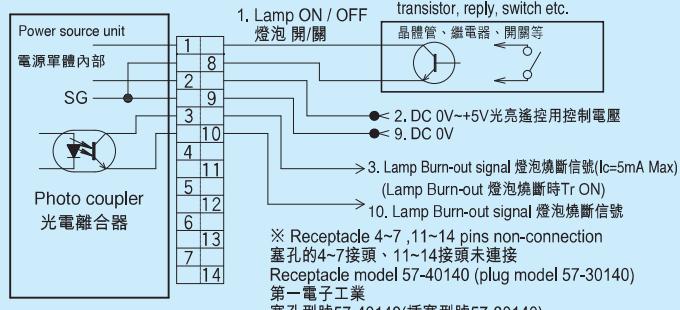

由於燈泡老化等原因，在初期設定的光量範圍內產生不能維持狀態時，黃色亮燈，同時從遙控用塞孔的4和11接頭之間輸出（開路集電極輸出：Tr ON）燈泡老化信號。

### 《External control system diagram》《外部控制用塞孔》

### 《Control Voltage Versus Output Voltage》《輸出電壓與遙控用控制電壓的關係》

#### <Caution>

A remote control voltage should not be up to DC+5V at maximum. If this limit is exceed, an output voltage will go beyond the rating, leading to lamp burn-out or power source failure.

#### <注意>

在使用時，遙控用控制電壓的最大值請不要超過DC+5V若超過DC+5V時，輸出電壓將超過規定值，會發生燈泡燒斷及電源的故障。

\* If using lamps monitoring fibres, and ordinary fibres (without monitoring) that do not confirm to the specifications, it will result non-functioning, and the yellow detection lamp (burn-out) will turn on sporadically

\* 如果使用指定規格外的燈泡，以及指定外的帶監視光纖的專用光纖和普通光纖(無帶監視光纖)會造成錯誤運作，而且黃色燈泡監視(老化)會時不時亮燈。

#### (Receptacle for remote control)

(遙控用塞孔)

1-8 : Halogen lamp on/off

3 : Lamp burn-out signal output (+)

10 : Lamp burn-out signal output (-)

2-9 : Light intensity remote control voltage (input)

(DC 0V~+5V MAX)

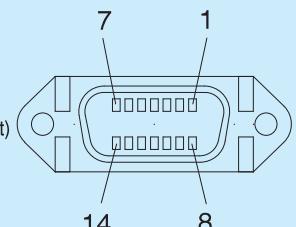

1-8 : 鹤燈開關

3 : 燈泡燒斷信號輸出(+)

10 : 燈泡燒斷信號輸出(-)

2-9 : 光亮遙控用控制電壓的輸入

(DC 0V~+5V MAX)
